

TRẦN VĂN TRẠNG

BACKEND DEVELOPER INTERN

Email: tranvantrang005@gmail.com Phone: +84 819 832 475

GitHub: github.com/trangok2005 Address: Ho Chi Minh City, Vietnam

OBJECTIVE & STRENGTHS

Third-year Information Technology student specializing in Backend Development with Python (Django/DRF), seeking a Backend Developer internship to sharpen my engineering mindset and system-level thinking through hands-on backend work in a real business environment.

- Solid foundation in data structures & algorithms, object-oriented programming (OOP), and database design — able to understand and apply flexible, scalable software architectures.
- Specialized in Python (Django, Django REST Framework), with a foundation in Java; hands-on experience with Flask, Docker, and software testing.

EDUCATION

Ho Chi Minh City Open University

Junior (3rd-year) student — Information Technology | 2023 – 2027

GPA: 3.42/4.0

TECHNICAL SKILLS

- Languages: Python, Java
- Backend: Django, Django REST Framework (DRF), Django Channels, Flask
- Database: MySQL,
- Auth & Async Processing: JWT, OAuth2, RabbitMQ, Celery
- Tools & Others: Docker/Docker Compose, Git/GitHub, Swagger, Pytest, React Native (basic)

PROJECTS

LMS — Learning Management System

Leader/Developer - Team of 2 - March 2026 : Django REST Framework · React Native · Django Channels · AI

Repo: <https://github.com/trangok2005/lms>

- Designed a full-stack backend with DRF and MySQL, implementing role-based access control (RBAC) for 3 user roles (Admin, Teacher, Student); built modules for courses, materials, quizzes, payments & enrollment, and discussion forums.
- Implemented real-time notifications with Django Channels; integrated AI (OpenAI/GitHub Models API) to analyze quiz results and generate personalized learning roadmaps.
- Connected the backend to a React Native (Expo) mobile app, helped document the API with Swagger.

Medical Appointment — Online Medical Appointment Booking System

Team Member (Backend Developer) - Team of 3 - January 2026: Django REST Framework · MySQL · RabbitMQ & Celery · Docker

Repo: <https://github.com/trangnhk/Medical-Appointment>

Demo: <https://medical-appointment-q26y.onrender.com/index/>

- Collaborated with a 3-member team to build a modular monolith backend supporting 4 roles (Patient, Doctor, Receptionist, Administrator); implemented JWT + RBAC auth and online booking flow with time-slot management and double-booking prevention.
- Contributed to implementing an event-driven architecture with RabbitMQ + Celery for asynchronous confirmation/reminder emails.
- Took part in containerizing the system with Docker & Docker Compose and deploying it live on Render; helped document the API with Swagger.

SOFT SKILLS

- Experience leading a small team (Leader of the LMS project): task allocation and progress tracking via GitHub.
- Proactive in self-learning and applying new technologies (Event-Driven architecture, Django Channels) to real-world projects beyond formal coursework.
- Strong reading comprehension of English technical documentation (Django/DRF docs, API references).
